Multimodal Concepts for Integration of Cytotoxic Drugs (Medical Radiology) Martin J. Brown, M.P. Mehta, Carsten Nieder

Over recent decades, combined modality treatment has drastically improved the cure rates for various malignant tumors. Further progress is expected through the design of sound combinations involving recently developed drugs. The first part of this book summarizes the rationale and the preclinical data for combined treatment with ionizing radiation and pharmaceutical agents. Individual chapters focus on different forms of combined treatment, with due consideration being given to a range of drugs and to emerging combinations with small molecules and antibodies. The second part of the book comprises a series of disease-specific chapters in which the clinical results of combined modality treatment are presented. The text, written by acknowledged experts, is specifically designed to be accessible to professionals from the various disciplines involved in multidisciplinary cancer care and to residents in radiation oncology training programs.
