Chernobyl: A Novel Frederik Pohl

Chernobyl: The very name conjures the catastrophe that the world feared could happen someday at a nuclear power plant. On April 26, 1986, a power surge caused the core of one of the reactors to explode, spewing a cloud of radioactive steam into the Ukrainian air. More than four thousand people died, as many as a half-million suffered potentially cancer-causing exposure, and the city around the plant became a toxic wasteland in which nothing could live. Before the disaster at the Chernobyl plant, nuclear catastrophe had been only a fear, a threat. But when the Chernobyl plant was destroyed, all those fears were suddenly all too real. ? ?

Frederik Pohl's novel of this disaster was written months after the tragic events. He had the cooperation of many people inside the U.S.S.R. with access to technical information and first-person accounts of what is still the most tragic nuclear event in human history and only one of two level 7 nuclear accidents, along with the Fukushima disaster of 2011.

This is fiction, but it is the most riveting, realistic account of what happened that has ever been written.
