Computational Auditory Scene Analysis: Proceedings of the Ijcai-95 Workshop

Computational Auditory Scene Analysis: Proceedings of the Ijcai-95 Workshop

The interest of AI in problems related to understanding sounds has a rich history dating back to the ARPA Speech Understanding Project in the 1970s. While a great deal has been learned from this and subsequent speech understanding research, the goal of building systems that can understand general acoustic signals--continuous speech and/or non-speech sounds--from unconstrained environments is still unrealized. Instead, there are now systems that understand "clean" speech well in relatively noiseless laboratory environments, but that break down in more realistic, noisier environments. As seen in the "cocktail-party effect," humans and other mammals have the ability to selectively attend to sound from a particular source, even when it is mixed with other sounds. Computers also need to be able to decide which parts of a mixed acoustic signal are relevant to a particular purpose--which part should be interpreted as speech, and which should be interpreted as a door closing, an air conditioner humming, or another person interrupting.

Observations such as these have led a number of researchers to conclude that research on speech understanding and on nonspeech understanding need to be united within a more general framework. Researchers have also begun trying to understand computational auditory frameworks as parts of larger perception systems whose purpose is to give a computer integrated information about the real world. Inspiration for this work ranges from research on how different sensors can be integrated to models of how humans' auditory apparatus works in concert with vision, proprioception, etc. Representing some of the most advanced work on computers understanding speech, this collection of papers covers the work being done to integrate speech and nonspeech understanding in computer systems.

From reader reviews:

Louis Clark:

The knowledge that you get from Computational Auditory Scene Analysis: Proceedings of the Ijcai-95 Workshop is the more deep you searching the information that hide inside words the more you get thinking about reading it. It does not mean that this book is hard to understand but Computational Auditory Scene Analysis: Proceedings of the Ijcai-95 Workshop giving you joy feeling of reading. The article author conveys their point in selected way that can be understood by anyone who read the idea because the author of this e-book is well-known enough. That book also makes your own personal vocabulary increase well. Making it easy to understand then can go together with you, both in printed or e-book style are available. We highly recommend you for having that Computational Auditory Scene Analysis: Proceedings of the Ijcai-95 Workshop instantly.

David Gehrke:

Often the book Computational Auditory Scene Analysis: Proceedings of the Ijcai-95 Workshop has a lot of knowledge on it. So when you read this book you can get a lot of help. The book was published by the very famous author. Tom makes some research previous to write this book. This specific book very easy to read you will get the point easily after scanning this book.

Calvin Cline:

In this age globalization it is important to someone to receive information. The information will make you to definitely understand the condition of the world. The condition of the world makes the information better to share. You can find a lot of referrals to get information example: internet, newspaper, book, and soon. You can observe that now, a lot of publisher that print many kinds of book. The book that recommended to you is Computational Auditory Scene Analysis: Proceedings of the Ijcai-95 Workshop this reserve consist a lot of the information from the condition of this world now. That book was represented how can the world has grown up. The dialect styles that writer make usage of to explain it is easy to understand. The writer made some investigation when he makes this book. This is why this book suited all of you.

Thelma Davis:

Many people spending their period by playing outside having friends, fun activity along with family or just watching TV the entire day. You can have new activity to enjoy your whole day by examining a book. Ugh, do you consider reading a book can really hard because you have to take the book everywhere? It alright you can have the e-book, getting everywhere you want in your Smartphone. Like Computational Auditory Scene Analysis: Proceedings of the Ijcai-95 Workshop which is having the e-book version. So , try out this book? Let's observe.
