## **Studies on Arthritis and Joint Disorders (Oxidative Stress in Applied Basic Research and Clinical Practice)**

This next volume in our established series proposes to systematically review the basic science and clinical knowledge of the role of free radicals and antioxidants, collectively known as “oxidative stress”, in the pathology of arthritis and other joint diseases. It will describe the most current diagnostic tools , laboratory methods and technology, to suggest ways of prevention and treatment and to emphasize the concept of the bench-to-bedside approach. The book will also provide specific coverage on emerging technology and medical applications including discussions of biomarkers and antioxidants as therapeutic agents and several more relevant aspects. In addition, the book will promote the concept of using biomarkers representative of oxidative stress reactions and free radical damage , as well as describe the effect of antioxidants in treating disease in clinical trials. The content will be valuable to researchers studying the development of arthritis/joint disease, and clinicians treating patients with these diagnoses.
